Table 1: Information on the Chemicals included in Protective Action Criteria (PAC) Rev 24A

PAC Rev 24A – May 2009

Table 1 presents an alphabetical listing of the chemicals in the PAC data set and provides Chemical Abstract Service Registry Numbers (CASRNs)[1] and physical constants for the listed chemicals. Information presented in this Table is derived from various sources including:

- SAX. [Lewis, R. J., Sr. (2005). *Sax's Dangerous Properties of Industrial Materials* (11th Edition). New York: John Wiley & Sons.]
- Hazardous Substances Data Bank (HSDB). The HSDB is "comprehensive, peer-reviewed toxicology data for about 5,000 chemicals" and it is accessible at http://toxnet.nlm.nih.gov/cgi-bin/sis/htmlgen?HSDB (August 15, 2008).
- The Handbook of Chemistry and Physics. [Lide, D. R. (Ed.). (2007). *CRC Handbook of Chemistry and Physics*. Internet Version. (87th Edition). Boca Raton, FL: Taylor and Francis. Accessible at http:/www.hbcpnetbase.com.]
- Material Safety Data Sheets (MSDSs) for individual chemicals.

Sometimes data on chemical properties varies among information sources and the table's authors have to choose which value to present. Because the table's authors are not deriving physical constants but are simply reporting key values obtained from published sources, they cannot make any claims about the accuracy of these values. Users of the table are advised to consult the referenced sources of information for additional information.

Additional information on the chemicals presented in Table 1 is provided in PAC Tables 2, 3, and 4.

Table 1, other PAC Tables, introductory material, definitions, and alternative methods of displaying PAC information are available electronically at: http://www.hss.energy.gov/HealthSafety/WSHP/chem_safety/teel.html.

Additional information on PAC values and Temporary Emergency Exposure Levels (TEELs) and links to other sources of information is provided on the Subcommittee for Consequence Assessment and Protective Action (SCAPA) web pages at: http://orise.orau.gov/emi/scapa/teels.htm.

[1] Information on the Chemical Abstract Service and CASRNs are provided at http://info.cas.org/.

The columns presented in Table 1 provide the following information (note that the information for each chemical now covers three pages):

	Heading	Definition
First Page in Table	No.	The ordered numbering of the chemicals as they appear in this alphabetical listing.
	Chemical Compound	The common name of the chemical compound.
	CAS Registry Number (CASRN)	The Chemical Abstract Services Registry Number for this chemical.
	SAX Number	The identification number provided in the SAX database for this chemical.
	Molecular Weight (MW)	The molecular weight of this chemical.
	Units of original limits	This provides the units of measure (e.g., ppm, mg/m^3) that were initially used to report PAC values.
	Toxicity conc dependent	"Concentration dependent." Indicates whether the chemical has any immediate protective action inhibiting effects (concentration dependent). "Y" indicates it does, "N" indicates it does not. This is a Temporary Emergency Exposure Limit (TEEL) development parameter that <u>is sometimes used to adjust the derived TEELs</u>.
	ppm to mg/m^3	Conversion factor to convert "parts per million" to "mg/m^3."
	Molecular Formula (MF)	The composition of elements for this chemical.
Second Page in Table	No.	The ordered numbering of the chemicals as they appear in this alphabetical listing.
	Chemical Compound	The common name of the chemical compound.
	CAS Registry Number (CASRN)	The Chemical Abstract Services Registry Number for this chemical.
	State at 25 ºC	Physical state of the chemical (S=solid, L=liquid, G=gas) at 25 ºC.
	MP or FP in ºC	The melting point/freezing point of the chemical in ºC.
	BP (ºC) @ 760 mm Hg unless indicated	The boiling point of the chemical in ºC at 760 mm Hg unless otherwise stated.
	Vapor Pressure – mm Hg	The pressure (often expressed in millimeters of mercury, mm Hg) characteristic at any given temperature of a vapor in equilibrium with its liquid or solid form.
	Vapor Pressure – T in ºC	The temperature at which the vapor pressure was measured (25 ºC assumed if not stated).
	SG @ 25 ºC	Specific Gravity (i.e., density of a substance divided by the density of water) of the chemical.
	SAX Hazard Rating	The health hazard rating of the chemical as specified in SAX.
	LEL (ppm)	The lower explosive limit.

	Heading	Definition
Third Page in Table	No.	The ordered numbering of the chemicals as they appear in this alphabetical listing.
	Chemical Compound	The common name of the chemical.
	CAS Registry Number (CASRN)	The Chemical Abstract Services Registry Number for this chemical.
	PAC-TEEL Derivation/ Review/Revision Dates – Originally derived	Values for a list of 88 chemicals were published in 1992. All other PAC-TEELs derived prior to 08/21/96 are given this date.
	PAC-TEEL Derivation/ Review/Revision Dates – Last reviewed	The date on which data or other information was checked.
	PAC-TEEL Derivation/ Review/Revision Dates – Last revised	Last revised; the date on which review of the input data required a change in the PAC-TEEL values (e.g., publication of new AEGLs).
	Source(s) of data used for PACs	A brief indication of where the data used for PAC-TEEL derivation was obtained (e.g., EPA for AEGLs).
	NFPA HHR	The National Fire Protection Association Health Hazard Rating.

Table 1: Information on Chemicals included in Protective Action Criteria (PAC) Rev 24A

No.	Chemical Compound	CAS Registry Number (CASRN)	SAX Number	Molecular Weight MW	Units of original limits	Toxicity conc depen-dent	ppm to mg/m^3	Molecular formula (MF)
1	Acacia; (Gum Arabic)	9000-01-5	AQQ500	240000	mg/m3	Y	9809.13	(Unknown)
